

Mogarenta

Feature Inventory - every feature and what it does

Generated for fixing & review | A catalog of current functionality (what, not how).

This document lists **88 features** across **14 areas** of the app, describing what each one does. Use it as a checklist to decide what to fix or change.

1. Account Types & Access Control

Who can see what. The app derives one of five roles from the signed-in account and gates pages accordingly.

Feature	What it does
Guest (signed out)	Can browse the catalog, search, view products, build a cart and read storefronts. Cannot checkout-as-self, chat, view orders, or open any business page.
Consumer ('user')	Standard shopper. Buys, reviews, chats, tracks own orders, keeps a wishlist. No business pages.
Business	Store operator. Full access to Dashboard, POS, Inventory, Customers, Supplier sourcing, and Staff, plus everything a consumer can do.
Supplier	Wholesale seller. Manages its own catalog and storefront via Profile; receives bulk-order inquiries. No POS/Dashboard.
Field Agent	Shops like a consumer but is tagged as an agent (product registrar). No business pages.
Admin	Platform staff (listed in the admins table). Reviews and approves/rejects businesses and manages users.
Route guarding	Business-only URLs (/dashboard, /pos, /inventory, /customers, /suppliers, /admin, /staff) show a 'restricted' screen with a role-appropriate call-to-action to anyone who isn't allowed.

2. Shopping & Product Discovery

The consumer-facing storefront - how products are found and viewed.

Feature	What it does
Explore home	Landing grid with a hot-deals banner, category chips, a Best Sellers row, and the full product grid.
Live search	Typing in the header search box filters the grid instantly by name, description, SKU, brand and tags.
Category filter	Tapping a category chip narrows the grid to that category and updates the item count.
Product card	Shows photo, name, rating, price, discount %, VAT badge, wishlist heart and an Add-to-Cart button.
Product detail	Full page: photo gallery, price/discount, stock status, description, tags, SKU, supplier link, quantity stepper, Add-to-Cart and Buy-Now.

Feature	What it does
Photo gallery + zoom	Multiple product photos in a swipeable carousel with thumbnails and dots; tapping opens a full-screen lightbox with arrows and a counter.
Reviews	Signed-in users leave a star rating + comment; the product's average rating and review count update. One review per user per product.
Wishlist	Heart toggle saves products; persists locally for guests and syncs to the account when signed in.
Similar products	Product detail shows a horizontal row of other items in the same category.
B2B visibility	Products flagged business-to-business are hidden from guests/consumers and shown only to business and supplier accounts.
VAT badges	Each product shows its tax treatment: no badge (tax-free), green 'VAT incl.', or amber '+5% VAT'.

3. Cart & Checkout

Turning a basket into a placed order. All prices are recomputed by the server at checkout.

Feature	What it does
Cart drawer	Slide-in panel listing items with quantity steppers, unit prices and a running subtotal.
Checkout summary	Subtotal, VAT line (when applicable), discount line and final total.
5% VAT	For 'tax-excluded' products, 5% is added on top as a separate VAT line; 'included' and 'none' products add nothing extra.
Coupons	Enter a code to apply a discount; invalid, expired or below-minimum coupons are rejected with a clear message. Validated and consumed server-side.
GPS delivery address	'Use my current location' captures the buyer's coordinates as the delivery point.
Payment methods	Waafi (mobile money, simulated demo flow), Cash, and Card.
Server-authoritative pricing	Order totals are computed from database prices - tampered client prices are ignored.
Stock guard	An order for more than the available stock is rejected; stock is decremented only after the order is saved.
Order confirmation	On success the cart clears, stock drops, and the order appears under Orders with an ORD- id.

4. Orders & Receipts

Tracking and managing orders after they're placed.

Feature	What it does
My Orders	Signed-in buyers see their own orders, newest first, expandable to line items.
Order tracking	Per-order timeline (Placed -> Processing -> Shipped -> Delivered) with the current step highlighted.

Feature	What it does
Business order management	Businesses see all orders across customers and can change an order's status.
Soft delete	Deleting an order never removes the row - its status is set to 'deleted' and it keeps a grey badge, preserving the record.
Revenue exclusion	Deleted, cancelled and refunded orders are excluded from every revenue figure.
Receipt + QR	Checkout and POS sales produce a receipt with a QR code that links to the live order record (re-scanning always shows current status).
Bulk-order inquiries	Wholesale bulk requests create a BULK- order in 'bulk_pending' status without touching stock.

5. Chat & Messaging

Real-time conversations between buyers and sellers.

Feature	What it does
Conversations list	All of a user's chats, newest first, each showing the last message and unread count.
Direct messaging	One-to-one text chat that updates in near real-time via Supabase Realtime.
Image messages	Send a photo from the device; it uploads and appears as an image bubble.
Image zoom	Tapping a chat photo opens it full-screen in a lightbox (tap backdrop or X to close).
Read receipts	Sent/read indicators on your own messages; opening a chat marks incoming messages read.
Profile peek	Tapping the other person shows their profile: name, type badge, bio and tap-to-call contact numbers.
Message a store	A 'Message' button on a storefront opens (or creates) a conversation with that seller.

6. Notifications, Search Page & Settings

Cross-cutting utilities.

Feature	What it does
Notifications	Bell with an unread badge; opening the list marks everything read and clears the badge.
Search page	A dedicated results page that can be deep-linked with a query (e.g. /search?q=phone).
Language	Switch UI language (English / Arabic / Somali); Arabic flips layout to right-to-left. Persists across reloads.
Dark mode	Toggles a full dark theme across the app; persists across reloads.
Currency	Currency display preference in settings.

7. Business - Dashboard

The store operator's analytics home (business accounts only).

Feature	What it does
Revenue stats	Total revenue, today's revenue and this-month revenue (excluding deleted/cancelled/refunded).
Operational stats	Orders this month, units sold, and supplier count.
Revenue chart	A multi-month revenue trend chart.
Category breakdown	A category pie/share of sales.
Recent orders	A live list of the most recent orders.

8. Business - Point of Sale (POS)

In-person selling at the counter (business accounts only).

Feature	What it does
Build a sale	Tap products to add them to a POS cart with live totals.
Barcode scan	Scan a product barcode with the camera to add it; unknown codes report 'not found'.
Discounts	Apply a discount to the POS sale.
Payment methods	Complete a sale with Cash, Waafi or Card, including split payments.
Cash drawer / sessions	Open and close a register session; closing shows the expected-vs-counted discrepancy.
Hold sale	Park an in-progress sale to resume later.
Receipt	Generates a printable receipt with QR code; stock decrements on completion.

9. Business - Inventory

Stock and catalog management (business accounts only).

Feature	What it does
Stock adjust	Minus/plus buttons change stock instantly; bulk restock via a quantity prompt.
Add / edit product	A full product form: name, price, original price, category, stock, SKU, description, supplier, brand, tags, images.
VAT / tax picker	Per-product choice of No Tax, Tax Included or Tax Excluded, reflected as a badge in the storefront.
Barcode field + scan	Type or scan a barcode into the product; scanning a known barcode opens that product for editing.
Image URL + preview	Add product image links with a live thumbnail preview.

Feature	What it does
AI description	Generate a product description automatically (uses the Anthropic API key).

10. Business - Customers, Sourcing & Staff

The rest of the back office (business accounts only).

Feature	What it does
Customer directory	Add, edit and delete customer records.
Supplier sourcing	Browse the supplier directory (filter by verified / category) and send bulk-order inquiries.
Staff / cashiers	Add and remove cashiers; a cashier can sign in at a dedicated cashier login with limited privileges.

11. Supplier Features

Tools for wholesale sellers (supplier accounts).

Feature	What it does
Supplier dashboard	Store header with product / order / revenue stats and Products, Sales and Settings tabs (opened from Profile).
Catalog management	Add regular and B2B products (with tier pricing / minimum order quantity) and import products via CSV.
Public storefront	A shareable store page (/:slug or /supplier/:id) showing store info, products and a Message button.
Store profile + photo	Editable store name, bio, location and profile photo.
Store map & directions	When the store sets a map pin, its profile shows an interactive map with the store location, a driving route from the customer's current location (distance + ETA), and an 'Open in Google Maps' button.
Bulk-order intake	Receives bulk-order inquiries from businesses with its bulk-discount applied.
Verification & badges	Verified badge and custom badge shown on the storefront.

12. Admin

Platform governance (admin accounts).

Feature	What it does
Business approvals	Review businesses, see who's requested approval, and Approve or Reject them.
User management	View platform users and admins.
Platform stats	Aggregate revenue / supplier / user figures.

13. Authentication

Signing in and account creation (Supabase Auth).

Feature	What it does
Email sign-up / sign-in	Create an account or sign in with email + password (email confirmation currently off).
Account type at signup	Choose Consumer, Business, Supplier or Field Agent; the correct role and access apply immediately.
Google OAuth	Sign in with Google, returning through a callback screen to the app signed-in.
Session persistence	Stays signed in across reloads without flashing the guest UI.
Sign out	Returns the whole app to the guest state everywhere.

14. Platform & Technical

App-wide behaviours that aren't a single screen.

Feature	What it does
Hash-routed SPA	The whole app runs as a single page using <code>/#/</code> routes; back/forward and reload all work and OAuth token hashes are ignored as routes.
Mobile-first layout	Responsive down to small phones with a fixed bottom navigation bar (visible in portrait and landscape) and a swipe-in side drawer.
Resilience	If the database is unavailable the catalog shows an empty state rather than crashing; failed actions show a toast and keep the cart intact.
PWA install	The app can be installed to the home screen and launched standalone.
Referrals	A referral code/link system for inviting others.
Free-trial gate	A trial/approval gate for business & supplier accounts exists in the codebase but is currently disabled (everyone gets immediate access).

Known Gaps & Caveats

- Store map pin needs two new DB columns (suppliers.latitude / longitude) - run migration_v3_1.sql section 6 to enable it on the live database.
- VAT (products.tax_mode), profile avatar_url/bio, and addresses GPS columns also depend on migration_v3_1.sql being fully run.
- Payment is a simulated demo flow (Waafi) - no real money is moved.
- The free-trial / approval gate is intentionally disabled in components/TrialGate.tsx.
- Email confirmation is OFF in Supabase Auth; sign-ups land signed-in immediately.
